

Keep student-athletes  
in the game with

online  
learning.

## NCAA® Eligibility Support

Nontraditional courses are revolutionizing teaching and learning—from emerging blended models to complete virtual programs. While most online programs are right for every student, educators must make sure the nontraditional courses they offer keep students on the path to success—especially those with dreams of participating in sports at NCAA Division I and II colleges and universities.

### A partner with the right game plan

Pearson shares the NCAA's commitment to ensuring that all student-athletes receive a quality high school education and graduate prepared for the rigors of college coursework. We'll work closely with you to help you understand NCAA policies and utilize rigorous GradPoint course content to help your student-athletes fulfill initial eligibility requirements.

GradPoint and our implementation specialists will help you address the key NCAA conditions for an online program:

1. Offers courses that are four-year college preparatory
2. Courses should have significant rigor, and challenging content and assessments
3. Requires regular and ongoing student/teacher interaction
4. Has certified and qualified teachers
5. Requires students to complete the entire course in an established timeframe
6. Uses a combination of assessments

GRADPOINT

# Teamwork is the key to success.

When implemented in a way that addresses the new NCAA requirements, GradPoint gives districts and schools a comprehensive, online courseware system that will allow their student-athletes to earn high school credit online, while ensuring that their eligibility to participate in college sports is not jeopardized.

## It starts with collaboration

From implementation to NCAA course approval, our team has the expertise to help you succeed. We can provide additional recommendations so course content meets NCAA requirements and can help you leverage customization if additional assignments are needed.

## Winning pathways

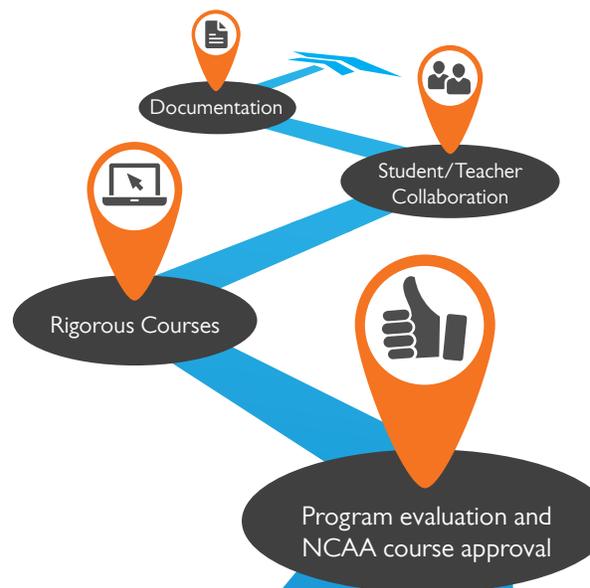

To ensure students complete all instructional content, our Sequential, Virtual, Honors, AP® and Electives pathways featuring award-winning, multimedia courses are recommended. Students can complete all courses enrolled full-time or complete individual courses to make up credit at a pace and place that fits their schedule and learning style.

## Ample communication

GradPoint students are most successful when taking the courses under the guidance, direction and supervision of a qualified teacher who approves the course curriculum, provides all instructional assistance and gives the students their final grades. GradPoint provides opportunity for student/teacher interaction like email for private messaging or threaded discussion boards for effective collaboration.

## Follow through

We make it easy to document completion of nontraditional courses on a student's transcript with a Gradebook that stores progress on work and projects and robust, on-demand reporting.
