

CyberForward Academy Instructor

Overview

CyberForward Academy is a quickly growing cyber security training company and searching for additional Instructor(s) to support our programs. CyberForward Academy is headquartered in Orange County, California and focuses on the rapid development of cyber security professionals. We develop skills with a focus on role-based training, foundational knowledge, and a comprehensive support system. The program is designed to enable success by removing common roadblocks for individuals looking to enter the industry such as access to the learning opportunities, transportation, technology, or other limitations while providing direct engagement in real, project-based experience needed to further practical skills and knowledge. CyberForward has programs available for high school students as well as working professionals or individuals looking to change careers.

Responsibilities as Duties

- Teach the CyberForward training program to both adults (over 18) and high school students
- Provide student support
- Assist with the development and updating of curriculum and learning materials
- Teach virtually and in person (as needed)
- Manage the online Learning Management System (LMS) for your assigned class – currently Canvas
- Assist with student recruitment efforts
- Assist in the training of additional instructors

Requirements and Qualifications

- Bachelor's degree preferred, preferably Information Systems Management, Computer Science, Criminal Justice, Cyber Security or related fields or equivalent
- Excellent verbal and written communication skills
- Nice to have, but not required:
 - Experience in corporate business environments in any role
 - Experience or strong understanding in Governance, Risk and Compliance (GRC,) especially risk management concepts and assessment procedures.
 - Familiarity with security compliance frameworks (NIST, HIPAA, PCI, SOC2, etc.)
 - Knowledge of enterprise security architecture including preventive and detective security controls and safeguards.
 - Security+ and Network+ certifications or a good understanding of network structure and security architecture.
- Ability to train and coach soft skills
