

Child Amputee Prosthetics Project (CAPP)

Providing comprehensive care for children in need of prosthetic and orthotic devices

Our Team Approach for Your Child's Individual Plan

Our physicians, prosthetists, therapists, and social workers will work together with you and your child to build a treatment plan that best meets your child's specific needs.

Custom Design, Fit and Fabrication

Our in-house lab uniquely allows us to measure, manufacture, fit and assess prosthetic and orthotic devices in one place. Our certified Prosthetists and Orthotists will create innovative fabrications for your child and specialize the prostheses to meet your child's evolving needs.

The Shriners Difference

- Multidisciplinary team assessment
- Individualized treatment plan
- Family-centered care
- In-house custom design and fabrication
- Care for the physical, emotional, and social well-being of each child

Child Amputee Prosthetics Project (CAPP)

Beyond the Extraordinary

“Everyone at the hospital educated us and involved us in every decision. Our son was invited to help with the design. They made it ridiculously easy for us.”

“In organizations like Shriners where excellence is the norm, one comes to expect that extraordinary things happen. For our family, a recent experience with CAPP staff went beyond extraordinary.”

“Over fifteen years, we have developed a high regard for the professionalism and dedication to patient care demonstrated by both past and present CAPP staff.”

“In an age of managed health care when most of us never develop a connection with a single health care professional, Shriners is simply amazing!”

Shriners Hospitals for Children Los Angeles provides care to children up to age 18 with orthopaedic conditions, burns, and cleft lip and palate, regardless of the family's ability to pay.
